

Temperature Matters: World Refrigeration Day, June 26

Celebrating the Essential Role of Refrigeration, Cooling and Heating Technologies, and the People that Make it Happen.

June 26, 2024 - TORONTO: In recognition of this year's *World Refrigeration Day*, which is supported globally by a growing network of industry, professional groups, scientific and engineering associations, as well as by governments and individuals, the HVACR Heritage Centre is celebrating the essential role refrigeration, cooling and heating technology play in enhancing the quality of life of Canadian society.

"In an era of escalating energy demands and climate change, efficient temperature control is essential in fostering sustainable development while reducing our environmental footprint," notes Craig MacDonald, HVACR President. "Temperature control is so much more than the comfort, health and air quality in homes and workplaces. It plays a vital role in keeping food safe, moving and accessible, and it is a critical component of Canada's industrial, manufacturing and scientific processes."

"Over the next year, the HHCC invites Canadians from all walks of life to join us online as we celebrate the people and technology that have made Canada a global leader in the refrigeration, cooling and heating industry.

World Refrigeration Day is an international awareness campaign to raise the profile of the refrigeration, air-conditioning and heat-pump sector and focuses attention on the significant role that the industry and its technology play in modern life and society. It draws attention to wonderful – but too often overlooked - engineering and science that is all around us every day and the people that make it happen.

Our goal at the HVACR Heritage Centre along with our partners and contributors is to promote and preserve the history of Canada's heating, ventilation, air conditioning, and refrigeration technologies and their essential contributions to our country's rich heritage and way of life.
